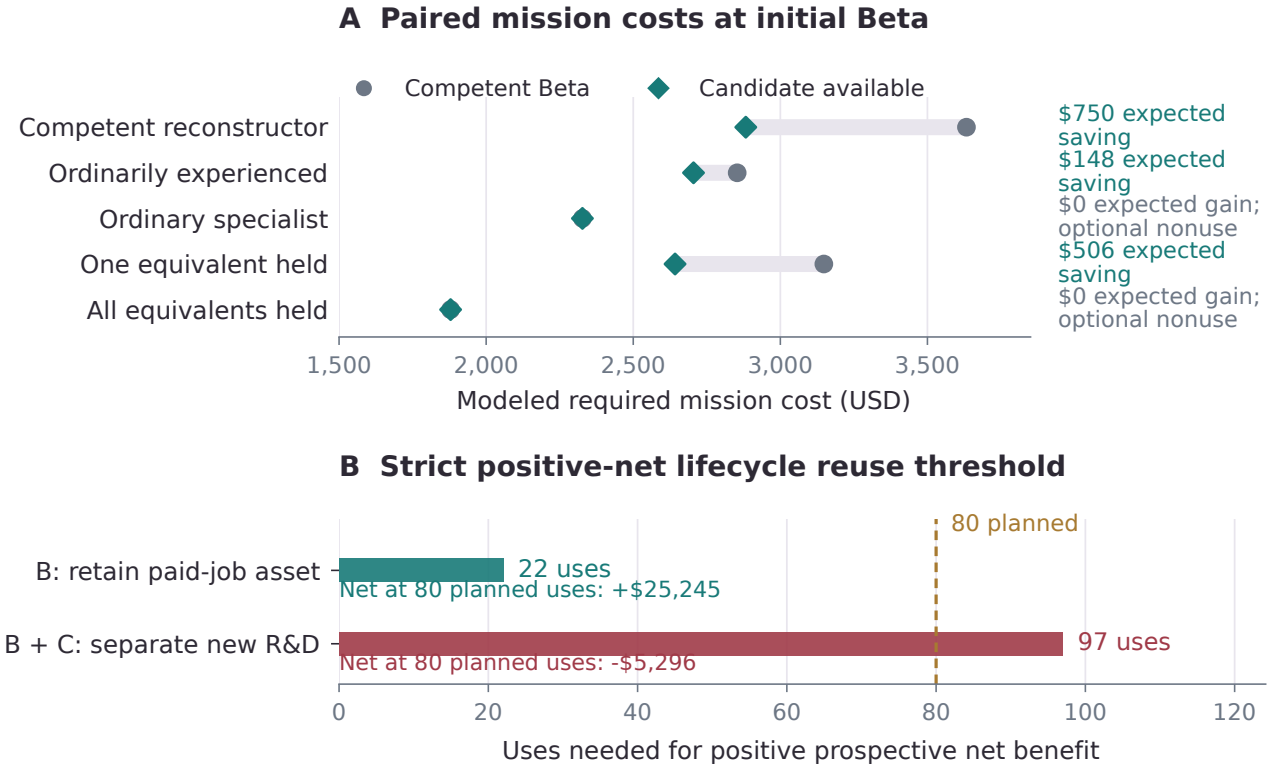
Recipient advantage depends on what Beta already holds

MODELED ANALYTICAL PANEL | Fixed workloads and declared branch probabilities



Lifecycle panel: 40 weeks; 75% competent reconstructors, 25% already equivalent; moving Beta.
Primary retention includes failure and upkeep. Separate R&D includes its stated failed-construction costs.
Thresholds hold lifetime and mean saving fixed; they are not observed demand or customer revenue.

No live frontier missions. No measured Alpha. Zero declared uncertainty allowance; no confidence interval.
Source-job A is not supplied in this standalone panel and is not recharged to prospective B/C.
